Chemistry is basic to an understanding of anatomy and physiology because our bodies, everything in our environment, and everything we take into our bodies are all chemical substances and therefore interact with each other through chemical reactions for physiological processes. (p. 25) 12. Energy has no mass and does not occupy space. It can only be defined by its effect on matter. Energy is ...

Human physiology seeks to understand the mechanisms that work to keep the human body alive and functioning, through scientific enquiry into the nature of mechanical, physical, and biochemical functions of humans, their organs, and the cells of which they are composed. The principal level of focus of physiology is at the level of organs and systems within systems.

Proper physiological functioning depends on a very tight balance between the concentrations of acids and bases in the blood. Acid-balance balance is measured using the pH scale, as shown in Figure 26.4.1. A variety of buffering systems permits blood and other bodily fluids to maintain a narrow pH range, even in the face of perturbations.

The oral phase of swallowing is the first stage of deglutition, and it is a voluntary process. It is also commonly known as the buccal phase. It involves the contraction of the tongue to push the bolus up against the soft palate and then posteriorly into the oropharynx by both the tongue and the soft palate.. The pressure that the food bolus places on the posterior oropharynx activates the ...
